

PICA

A SCREENWRITING INSTRUMENT
FEATURES & COMMANDS · MMXXVI

The screen **is** the page. Drop in any screenplay PDF and it comes back **identical** — every line, indent and page break — fully editable, with Final Draft's own typing grammar under your hands. True Courier at true margins: screen, print and PDF are one layout.

THE GRAMMAR — ENTER

SCENE HEADING	↵ Action
ACTION	↵ Action
CHARACTER	↵ Dialogue
PARENTHETICAL	↵ Dialogue
DIALOGUE	↵ Action
TRANSITION	↵ Scene Heading
blank element	↵ the element menu — pick by number, letter or arrows

THE GRAMMAR — TAB

SCENE HEADING	→ walks the slug, then Action
ACTION	→ Character
CHARACTER	→ Parenthetical — <i>blank cue</i> : Transition
DIALOGUE	→ Parenthetical, self-wrapping ()
PARENTHETICAL	→ Dialogue, from anywhere inside
TRANSITION	→ Scene Heading

| INT → INT. your locations... → - DAY / NIGHT... → Action

IT ALREADY KNOWS

- **SmartType** — characters, locations and times complete from the script itself; in a two-hander it offers the other speaker first. → accepts.
- **int.** becomes INT. as you type · ALL-CAPS ending TO: becomes a transition · “(” in dialogue becomes a parenthetical.
- **Auto-(CONT'D)** when the same speaker resumes after action.
- **Right-click anything** — it names what it is and offers to change it, best guess first. Select a run and press → or ↵ to retype it all.
- **Click anywhere** — the caret lands at the nearest text, no precision required.

KEYBOARD

⌘1-⌘7 · ⌘0	Scene · Action · Character · Paren · Dialogue · Transition · Shot · General
⌘\	element menu
⌘F	find & replace — ↵ / ⌘ ↵ walk the hits; Replace All is one undo
⌘B · ⌘I · ⌘U	bold · italic · underline
⌘Z · ⌘⇧Z	undo · redo — every operation, including Replace All and restores
⌘↵	hard line break inside an element
⌘S	sidebar — drag its edge to resize, double-click to reset
⌘T	title page — hidden by default; page 1 is your first written page
⌘,	settings — interface size, theme, paper, writing aids, snapshots
⌘N · ⌘O · ⌘I	new script · open · import PDF
⌘P · ⌘E	print · export a true .pdf file, identical pages
zoom	pinch, ⌘+ / ⌘- · click % to fit · double-click for 100%
esc	closes any menu or panel

FEATURES

- **Imports the real world** — production drafts with revision headers and scene-number gutters, bare or dotted page numbers, even fonts that hide their character map: cracked, scrubbed, reproduced. Proven line-for-line on Tenet: 5,907 of 5,907.
- **Final Draft, both ways** — .fdx in and out, lossless, emphasis included.
- **Draft mode** — named drafts stored inside the document; compare any draft to the current script scene by scene; restore keeps a safety copy and is undoable.
- **The index** — drag to reorder, pin, rename, duplicate, export, delete; each script reopens where you left it.
- **Never lose a word** — autosave as you type, rolling snapshots, additive storage that every update must honour.
- **Exports** — PDF · Final Draft · Fountain · JSON.
